Shot Sleeve Lubricator

Proper and consistent Lubrication of the Shot Sleeve and Plunger tip of an aluminium die casting machine is essential to maintain good casting quality.

Therefore it is necessary to deliver Proper amount of lubricant where and when it is needed during a die casting cycle. Involute Shot Sleeve Lubricator delivers the lubricant close behind the plunger tip as it retracts, The tip spreads the lubricant in a smooth even film over the entire length of shot sleeve. The lubricant is applied from a pressure vessel.
